GOLD OROGEN COMMENCES 2026 NEW BRUNSWICK EXPLORATION PROGRAM AT MCINTYRE BROOK & RILEY BROOK

Vancouver, BC (August 26, 2026) - Gold Orogen Resources Corp. (CSE:OROG) (the "Company" or "Gold Orogen"), is pleased to announce the commencement of 2026 exploration program at its McIntyre Brook and Riley Brook gold properties in northwestern New Brunswick.

The project is on the Iapetus Suture belt and part of the Bathurst mining camp and is adjacent to Kinross-Puma joint venture project. The 2026 exploration budget is $1.55 million for New Brunswick. The focus of this year's program on McIntyre Brook is drilling. The drilling will be further refined with trenching and field program. Additionally, the budget will include an inaugural Riley Brook soil sampling and trenching.

"The 2026 program follows up a successful 2025 program where we drill tested geological continuity of Kinross-Puma's contiguous mineral discovery Williams Brook at McIntyre Brook and further refines it for drilling this year. At Riley Brook, this is the first significant field program and sampling ahead of a maiden drill program, which could significantly expand our mineral potential at both properties." comments Gary Wong, VP Exploration of Gold Orogen.

Exploration work details include:

Following the Q4 2025 drilling program where we confirmed a traceable mineralized structural zone, likely the extension of the Williams Brook (Kinross-Puma) mineralization trend onto McIntyre Brook. Of the 3 of 6 holes intersected gold mineralization: 2 holes (including MB25-02) hit an altered structural zone; 1 hole intersected a gold-mineralized quartz vein with MB25-02 returned 1.12 g/t Au over 4.85 m.

McIntyre Brook

- Trenching across six priority trenches in July 2026, targeting the corridor between the McIntyre Prospect Main Zone and the Moose Brook showing.
- Field mapping and visual inspection of trench exposures across mineralized felsic horizon at the McIntyre Prospect to check continuity toward Moose Brook to the southwest.

- trenching further to complete coverage toward the Puma/Panthera property boundary in the northwest.

Riley Brook:

- Sampling a planned 1,500 samples.
- Continuing soil geochemical across three grids.
- Extending a previously identified 3-kilometre gold-tungsten-antimony soil anomaly in the southwest of the Riley Brook property and testing two new grids for mineralization associated with a possible small alkaline intrusive.

Qualified Person

The technical information contained in this press release was reviewed and approved by Gary Wong, P.Eng., Vice President Exploration of Gold Orogen Resources Corp., designated as a Qualified Person under National Instrument 43-101.

ABOUT GOLD OROGEN

As the Resulting Issuer of the February 2026 reverse-take-over of Great Republic Mining (CSE:GRM) by Gold Orogen Exploration Corp (formerly named 1475039 B.C. Ltd. and a subsidiary of Lode Gold (TSXV:LOD), Gold Orogen is an early-stage exploration pure play with quality assets in the Yukon and New Brunswick, Canada. Optionality exists as assets are diversified on two mineral belts that are known to have prolific gold endowment.

New Brunswick Assets - During late 2024, a joint venture was formed between subsidiary company 1475039 and the Company's 19.9% strategic investor to create one of the largest land packages in New Brunswick, consisting of an area spanning 445 km^2 with a 44 km strike. The McIntyre Brook and Riley Brook properties sit on a highly prospective belt that has seen many exciting discoveries including Dalradian, New Found Gold and Calibre Mining. The Kinross-Puma joint venture project surrounds McIntyre Brook.

Yukon Assets - The Golden Culvert / WIN properties sit on the southern end of the Tombstone Belt which in recent years has seen extensive exploration success. It has Reduced Intrusion-Related Gold Systems (RIRGS) targets and sedimentary hosted orogenic mineralization. Over 4,500 m has been drilled with 50 gram meter intercepts. *Cautionary note: This is not a true width calculation as the true attitude of the mineralized body is unknown at this time.

Cautionary Statement Regarding Forward-Looking Information

Neither the Canadian Securities Exchange (CSE) nor its Regulation Services Provider (as that term is defined in the policies of the CSE) accepts responsibility for the adequacy or accuracy of this release.

This news release includes “forward-looking statements” and “forward-looking information” within the meaning of Canadian securities legislation. All statements included in this news release, other than statements of historical fact, are forward-looking statements including, without limitation, statements with respect to the use of proceeds, advancement and completion of resource calculation, feasibility studies, and exploration plans and targets. Forward-looking statements include predictions, projections and forecasts and are often, but not always, identified by the use of words such as “anticipate”, “believe”, “plan”, “estimate”, “expect”, “potential”, “target”, “budget” and “intend” and statements that an event or result “may”, “will”, “should”, “could” or “might” occur or be achieved and other similar expressions and includes the negatives thereof.

Forward-looking statements are based on a number of assumptions and estimates that, while considered reasonable by management based on the business and markets in which the Company operates, are inherently subject to significant operational, economic, and competitive uncertainties, risks and contingencies. These include assumptions regarding, among other things: the status of community relations and the security situation on site; general business and economic conditions; the availability of additional exploration and mineral project financing; the supply and demand for, inventories of, and the level and volatility of the prices of metals; relationships with strategic partners; the timing and receipt of governmental permits and approvals; the timing and receipt of community and landowner approvals; changes in regulations; political factors; the accuracy of the Company's interpretation of drill results; the geology, grade and continuity of the Company's mineral deposits; the availability of equipment, skilled labour and services needed for the exploration and development of mineral properties; and currency fluctuations.

There can be no assurance that forward-looking statements will prove to be accurate and actual results, and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from the Company's expectations include a deterioration of security on site or actions by the local community that inhibits access and/or the ability to productively work on site, Previous actual exploration results, interpretation of metallurgical characteristics of the mineralization, changes in project parameters as plans continue to be refined, future metal prices, availability of capital and financing on acceptable terms, general economic, market or business conditions, uninsured risks, regulatory changes, delays or inability to receive required approvals, business disruptions, and other exploration or other risks detailed herein and from time to time in the filings made by the Company with securities regulators, including those described under the heading "Risks and Uncertainties" in the Company's most recently filed MD&A. The Company does not undertake to update or revise any forward-looking statements, except in accordance with applicable law.
